

Law Enforcement Camera Systems

- The 5.6 inch LCD monitor supports two water-resistant cameras, giving you complete coverage of the area surrounding your vehicle.
- The color zoom camera has a 1/4 inch image sensor.
- The cabin-mounted camera has a 1/3 inch image sensor, fixed lens, and a shutter speed of 1/60.
- The wireless audio unit has 40 channels and a range of 1,000 feet.
- The PatrolRecorder CF (compact flash) and the PatrolRecorder RHD (removable hard drive) are optional MDVRs with this system

Safety Vision offers wireless solutions through our SafetyNet™ Central Management System (CMS). SafetyNet CMS securely downloads and automatically manages recorded video, and integrates with our SafetyView® PRO 3.0 viewing software. NOTE: You may order our products through your existing Dell contract.

HD Reader \$395.00

Others offerings

- Collision Avoidance Cameras
- Mass transit systems
- School Bus Systems

Accessories

- HD RAM Mount
- Camera cage
- Swivel mount for LCD monitor

"Since September 2005, I have been using an in-car video system graciously provided to the Angleton Police Department and installed by Safety Vision. As a whole, I have found the system to meet and exceed my expectations, especially after relocating the body microphone antenna to the upper-front right hand portion of the windshield. I would recommend that any and all units purchased be installed the same. The picture quality on the camera is excellent and the speed zoom feature is especially useful, as is the hidden microphone in the rear cab of the unit. I have visited the corporate headquarters of Safety Vision and found the company to be professional and of the highest quality. The immediate service I have received shows Safety Vision is professional and reputable."

Remote control FLIR Camera system

SafeDrive MiniDVR \$1,395.00

The SafeDrive MiniDVR™ mobile digital video recorder (MDVR) system with two integrated cameras installs directly to the windshield, securely and permanently. The system captures video of road and cabin, with both a forward-facing and an interior-facing camera. With its compact size and mounting versatility, this reasonably priced, feature-rich MDVR is adaptable to any vehicle in your fleet.

Recording is triggered in the event of a crash; when the vehicle's operator is speeding or driving erratically; or when the driver manually triggers the event button

Battery backup ensures events are recorded even with a loss of power
The system's post-event snapshot feature allows recording to continue while video is downloading to the CompactFlash® card

SafeDrive records global positioning system (GPS) time and date, vehicle speed, longitude and latitude, and x- and y-axis G-force data synchronized with the video and audio

The MDVR can be installed permanently to a windshield with an included bracket, or for temporary use with custom SafeDrive MiniDVR™ suction cups
