

SAFETYTRAX

Integrated fleet management system

GPS

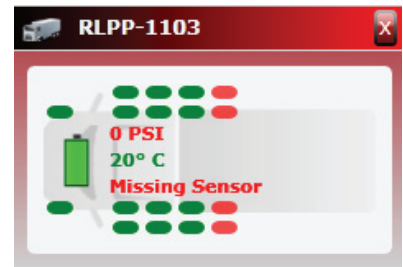

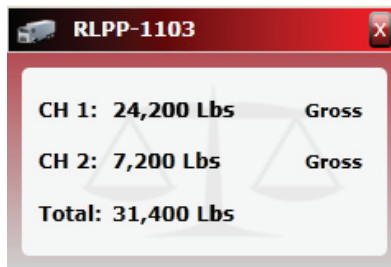

Breadcrumb capabilities, truck routes, global mapping, stop durations, speed variations and truck identification. Readings are available for download for 6 months, compared to the market average of 3 months.

Weight

Integration of vehicle gross & axle weights with GPS and communications functions for alerts of overloading, underloading, load shifting and possible payload theft.

TPMS

Real time tire pressure and temperature readings. Alerts to low and high pressure situations. In-cab and/or remote monitoring.

Rice Lake, Advantage PressurePro and SafetyVision - all leaders in their markets - have joined forces to bring you **SafetyTrax**; a cutting-edge, all-in-one solution touting advanced weight capabilities, market leading tire pressure monitoring technology and full GPS abilities. This collaboration of fleet monitoring technologies results in a significant ROI tool for commercial trucking fleets. **SafetyTrax™** increases driver productivity by an average of 29%, decreases driver over-time requests by 12% and

increases fuel savings by 8%. Both fleet drivers and management are alerted in real-time when the truck gets loaded, where the truck is, what the tire pressure is and if the truck is within legal weight limits—presenting the ability to take charge of non ideal situations immediately.

Weight. TPMS. GPS. All in one, perfect, package.

Mobile video solutions for enhanced safety
